

Environment Policy

Environmental protection as an important component of corporate policy

We are aware that our activities affect the environment. It is therefore our duty to reduce the impact on the environment to the possible minimum within the framework of economic and technical possibilities and by means of well thought-out processes. Our responsibility in dealing with the environment and resources requires the identification and evaluation of our significant environmental aspects as well as the fulfillment of defined environmental goals and their verification by means of measurable characteristics.

Our primary environmental goals are:

- Responsible use of the applied resources to protect the environment
- Reduction of the effects of our work processes on the environment
- Minimization of the waste quantities and the energy consumption
- Use of environmentally friendly materials

Based on our shared responsibility towards people and the environment, we have set ourselves the goal of harmonizing our deposits and environmental precautions by improving environmental performance and avoiding or reducing environmental pollution.

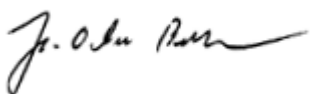

In doing so, it is a matter of course for us to comply with the legal and official regulations and other environmental interests as well as the requirements we have set ourselves for environmental protection and to exceed them where possible.

Every employee is involved in our management system and has the right and duty to work towards eliminating circumstances that cause unnecessary environmental pollution. Through information and training we promote environmentally conscious behavior of our employees inside and outside the company.

We consider environmental compatibility and occupational safety in our products. Therefore environmental aspects, occupational and product safety are an integral part of our services. We use state-of-the-art technologies to meet high standards and protect our sites and their surroundings from damage and harmful influences.
